Alice has a mathematics test for which she is underprepared. She has to do at least one question correctly to pass the test. He decides to do a question which needs her to find the smallest prime number which is larger than a given integer N. Your task is to find and return an integer value representing the smallest prime number larger than N.
Input Format:
input1: An integer value N
input1: An integer value N Output Format: Return an integer value representing the smallest prime number larger than N.
Return an integer value representing the smallest prime number larger than N.
